

Wireless Range Extender

Applications

- Commercial Irrigation Systems
- Golf Courses
- Roadway/Highways/Median Landscape Irrigation
- Agriculture

Product Description

The Wireless Range Extender is a, drop-in solution for filling communication gaps in a mesh network. It plugs into a standard electrical outlet for quick and easy installation. Once installed, it then establishes itself as a routing node, providing expanded network range and adding redundancy to a network.

Benefits

- Extends the range and strength of WaterOptimizer mesh network
- Creates additional network pathways for more reliable mesh networking
- Plugs into a standard 110/120 VAC power outlet for easy installation
- Plug-n-Play

Range Extender Specifications	
RF Data Rate	250 kbps
I/O Communications	Wireless RF
Wireless Frequency Band	900 MHz and 2.4 GHz
Power Requirement	110/120 VAC
Dimensions (L x W x H)	2.87" x 1.97" x 1.37"
Approvals	USA: FCC Canada: IC
